

Tasneem Knit Industry

tasneemknitindustry.com · Industrial Knitting Machine Import & Sourcing · July 2026

Context

Business: Tasneem Knitting Industry — direct importer of industrial knitting machines (circular knitting, jacquard, interlock, terry, finishing) from Taiwan/China for Bangladesh's garment export sector. Machines range ₳680,000–₳1,050,000. Because stock fluctuates, the business works as a **machine sourcing service**: buyers describe what they need, the company finds and imports it.

Current site: WordPress + WooCommerce, functional but built as a webshop (Add to Cart on ₳10-lakh machines — the wrong model). Key problems found:

- About page says "leading knitwear manufacturer and exporter" — contradicts the actual importing business; kills credibility
- Thin placeholder content: no founding year, story, photos, or proof
- Trust signals (SGS/BV/ITS inspection, CFR Chattogram, BIN/IRC) exist but are buried
- No machine-request / sourcing feature — the core of the business model is missing from the site
- Contact info exists (phone 01887683333, WhatsApp 01711110516, Fatullah/Narayanganj address) but isn't prominent

Decisions made:

- Stay on WordPress (owner can self-manage catalog; keeps SEO)
- Keep indicative prices + replace cart with Request Quote / WhatsApp buttons
- English only
- Access credentials to be obtained (see Phase 0 shopping list)

Goal

Turn the site from a half-webshop into Bangladesh's most credible **machine sourcing & import** site: clean industrial B2B design, strong trust signals, and a Machine Request system that delivers every inquiry to the owner's email.

Phase 0 — Access & Safety (blocker)

Exact shopping list of what to get from the owner:

1. **WordPress admin login** — URL `tasneemknitindustry.com/wp-admin` , username + password (admin-level account)
2. **Hosting control panel login** — provider name (e.g., ExonHost, Namecheap, Hostinger...) + cPanel/dashboard credentials
3. **Domain registrar** — where `tasneemknitindustry.com` is registered (often same as hosting)
4. **Receiving email address** for machine requests (which inbox should inquiries land in?)
5. Confirm the phone/WhatsApp numbers currently on the site are correct

Once access exists:

- Log into wp-admin → create an **Application Password** (Users → Profile) for programmatic work via the WordPress REST API
- Take a **full backup** (hosting backup tool, or install UpdraftPlus) before touching anything
- Inventory: current theme name, installed plugins, WP/PHP versions, whether host offers staging

Working method: WP REST API for pages/products/media, FTP/cPanel File Manager for theme files & custom CSS, and guided click-by-click instructions for the few admin-UI-only steps (plugin installs). Nothing is changed on the live site without a backup first.

Phase 1 — Content & Identity Fix

- Rewrite **About Us**: correct identity (machine importer & sourcing specialist, NOT knitwear manufacturer), real story — founding year, owner's name, supplier brands (JIUNN LONG, Longjun, RONGXIANG...), what "direct import, no middleman" means for the buyer
- Rewrite **Homepage copy** around the sourcing model: "Tell us the machine you need — we find it, inspect it, and deliver it to Chattogram"
- New page: **How Buying Works** — inquiry → sourcing → quotation → L/C payment → third-party inspection (SGS/ITS/BV) → CFR Chattogram shipping → installation & after-sales support
- Content needed from owner: logo file, real photos (machines in warehouse, deliveries, installations, team), company facts, Facebook page URL if one exists

Phase 2 — Design Overhaul

- Install a fast, professional WooCommerce-compatible theme (Astra / Kadence / Blocksy — pick after seeing current setup) + child theme for custom branding
- Industrial B2B visual language: strong navy/steel palette, real machine photography, clear typography — no stock-photo clutter

New homepage structure

1. Hero: headline + two CTAs ("Browse Machines" / "Request a Machine")
 2. Trust bar: SGS-ITS-BV inspection • CFR Chattogram delivery • BIN & IRC licensed • Installation support
 3. Machine categories grid
 4. Featured / available machines
 5. "Can't find your machine?" → Machine Request CTA block
 6. How It Works (4 steps)
 7. Footer: full contact info, address, WhatsApp, categories, credentials
- Header: phone + WhatsApp visible at all times; "Request a Machine" button in the nav
 - Floating WhatsApp click-to-chat button on every page (BD B2B runs on WhatsApp)

Phase 3 — Machine Request System (the centerpiece)

- **Form plugin:** Fluent Forms or WPForms (free tier is enough)
- **Fields:** name, company/factory, phone (required), WhatsApp, email, machine type (dropdown + "Other"), preferred brand, condition (new/used/either), key specs (diameter/gauge/feeders), quantity, budget range (optional), needed-by timeline, message
- **Delivery:** email to the owner's chosen inbox. Install **WP Mail SMTP** with a real SMTP sender (Gmail app password or free Brevo account) — without this, WordPress emails land in spam. Every submission is also stored in the WP database as backup
- **Placement:** dedicated "Request a Machine" page; nav button; homepage CTA block; every product page
- **Auto-reply** to the buyer: "We received your request, we'll contact you within 24 hours" + WhatsApp number

Phase 4 — WooCommerce → Catalog + Quote Mode

- Disable cart/checkout: catalog-mode approach (YITH Catalog Mode free, or WooCommerce settings + snippet)
- Replace "Add to Cart" with **"Request Quote"** (opens the machine-request form pre-filled with that machine's name) + **WhatsApp** button (deep link with machine name pre-typed)
- Keep prices visible with a note: *"Indicative price — subject to availability and exchange rate. Contact for current quote."*
- Add "Availability: In Stock / By Order" status field to products so the sourcing model is explicit
- Clean product data: consistent titles, specs table (brand, origin, diameter, gauge, feeders, condition), multiple photos per machine

Phase 5 — Trust, SEO & Performance ("best in Bangladesh")

- SEO plugin (Rank Math free): meta titles/descriptions targeting "circular knitting machine price in Bangladesh", "knitting machine importer Bangladesh", brand-name searches
- **Google Business Profile** for the Narayanganj address (guided setup — huge for local trust and Maps)
- Performance: caching plugin (LiteSpeed Cache if the host supports it), image compression, verify SSL/HTTPS everywhere
- Add sold-machine gallery / client mentions when the owner provides them; Facebook page link
- Favicon, proper logo sizing, remove unused demo plugins/pages

Phase 6 — Verification & Handover

- Submit a real test Machine Request → confirm email arrives in the inbox (not spam) and auto-reply works
 - Test WhatsApp buttons from an actual phone
 - Click every nav link; check all pages on mobile viewport
 - Run Google PageSpeed on home + a product page (target: mobile score meaningfully better than current)
 - Fresh backup of the finished site
 - Short written guide for the owner: how to add a machine, how to see form submissions
-

Order of Execution

Phase 0 is a hard blocker — nothing happens until access arrives. Meanwhile Phase 1 copy drafting can start immediately (no access needed). Then Phases 2 → 3 → 4 together (they touch the same templates), then 5, then 6.

What can start today, before any access

- Draft all new page copy (Home, About, How Buying Works, Contact)
 - Design a homepage mockup as a local HTML preview to approve the visual direction before it's built into WordPress
-
